OUTDOOR 2CM PORCELAIN STONEWARE SLAB

- Frost Resistant
- Thermal Shock Resistant
- Anti-Slip Finish
- Removable and Reusable
- Chemical Attack Resistance
- High Static Load Resistance

Applications with direct installation:
- Gravel
- Grass
- Plot System

Resistente a la helada
Resistente a variaciones térmicas
Acabado antideslizante
Desmontable y reutilizable
Resistente a productos químicos
Elevada resistencia a la flexión

Aplicaciones de instalación directa:
- Grava
- Césped
- Sistema de plots

For further information see pages 406 - 409

The new 2CM Porcelain Stoneware Slabs are ideal for outdoor pavings, including raised pavings. Hard-wearing and resistant to thermal shock, loads and stresses, our 2CM porcelain stoneware is highly suitable for paving terraces and balconies; and also for laying paths in outdoor areas. The perfect alternative to wood and stone, it will remain absolutely unchanged over time.

El nuevo espesor de 2CM es ideal para pavimentos exteriores, incluidos los pavimentos sobreelevados. Resistente al desgaste, a los cambios bruscos de temperatura, las cargas y las solicitaciones, nuestro porcelánico 2CM resulta adecuado para su colocación en terrazas y balcones, así como para realizar sendas en zonas de exterior. Perfecta alternativa a la madera y a la piedra, es un producto que no sufre alteraciones frente el paso del tiempo.

INSTALLATION SYSTEMS 2CM | SISTEMAS DE INSTALACIÓN 2CM

ON PLOTS | SOBRE PLOTS

Our tiles can be easily installed on raised floor systems to provide drainage of rain water. Just ensure that the area to be installed is leveled , compact and can support the weight.

Nuestras baldosas son fácilmente instalables en sistemas de suelo sobreelevado mediante plots, lo que facilita el drenaje de agua. Debe asegurarse, antes de proceder a la instalación, de tener un area nivelada, compacta y que pueda soportar el peso de las baldosas.

TRADITIONAL INSTALLATION | INSTALACIÓN TRADICIONAL

The traditional adhesive placement on the filler layer is ideal for paving exterior passable areas, such as access ramps, parkings, patios... This type of placement provides a high resistance to dynamic and concentrated loads. It is very practical for residential, commercial and public areas.

La colocación tradicional con adhesivo sobre la capa de relleno es idónea para pavimentar áreas transitables exteriores, como rampas de acceso, aparcamientos, patios... Este tipo de colocación proporciona una elevada resistencia a las cargas dinámicas y concentradas. Resulta muy práctico para ámbitos residenciales, comerciales y públicos.

OVER GRAVEL | SOBRE GRAVA

The placement over gravel is a practical and versatile solution that is characterized by a contemporary aesthetic, ideal for enhancing roads, pedestrian walkways and rest areas. Before installing the floor, make sure the floor is level and compacted. Once conditioned, install the tiles as you prefer, providing a generous joint between them.

La colocación sobre grava constituye una solución práctica y versátil que se caracteriza por constituir una estética contemporánea, idónea para realzar caminos, pasarelas peatonales, patios y zonas de descanso. Antes de proceder a la instalación del pavimento, asegúrese de que el suelo está nivelado y compactado. Una vez acondicionado, instale las baldosas como prefiera, dejando una junta generosa entre ellas.

OVER GRASS | SOBRE CÉSPED

The direct placement of the 2cm tiles on grass allows to create walkways and paths in areas to integrate them in a green environment as well as in various architectural contexts. Especially recommended for gardens, paths and paths before homes, terraces, parks and public recreation.

La colocación directa de las baldosas de 2cm sobre hierba permite crear pasarelas y caminos en áreas para integrarlas tanto en un entorno verde como en diversos contextos arquitectónicos. Especialmente recomendable para en jardines, sendas y caminos ante viviendas, terrazas, en parques y espacios públicos de ocio.

Slip Resistance Index / Indice de Resbaladicidad

[1] This test has been developed to simulate the action of a slipping foot; the method uses a swinging arm which contacts a set area of flooring in a controlled manner, certain temperature and humidity values, via a rubber slider. The flooring slip resistance is determined by the over-swing of the pendulum and is directly affected by the surface profile/roughness of the floor.
Se obtiene usando como equipo de ensayo el péndulo de fricción para evaluar las propiedades de fricción de la probeta. El péndulo de fricción incorpora un patín deslizante, hecho de goma normalizada fijado al extremo del péndulo. Durante la oscilación del péndulo, la fuerza de rozamiento entre el patín y la superficie de la probeta a ser ensayada se mide mediante la reducción de la longitud de la oscilación empleando una escala calibrada.

[2] This method of slip resistance testing involves a metallic structure with the tiles fixed where the tester walks backwards whilst the platform is inclined 1º per second till the test subject slips. Based on the angle of inclination of the slip, the test is repeated several times close to that critical angle and the slipperiness is given a classification.
Consiste básicamente en una estructura de acero pintado con las baldosas cerámicas debidamente adheridas. El operador deberá caminar hacia atrás sobre la plataforma mientras esta se va inclinando a 1º por segundo. El movimiento se detiene por el operador en el ángulo crítico de deslizamiento. La prueba se repetirá varias veces en la cercanía del ángulo crítico para encontrar un resultado más preciso.

Steps / Peldaños

The availability of the different steps as well as their price groups are indicated in every collection's page. These can also be ordered without grooves under specific request. In order to purchase steps, it is necessary to reference them as follows: *model name + colour + finish + size + step type + with or without grooves*
Example: *Novocemento Grey Natural 45x90 Gradone 45 with grooves.*

Para conocer la disponibilidad de peldaños de cada colección y sus grupos de precio dirigirse a las páginas específicas de la colección deseada. Todos estos productos también se pueden realizar sin ranuras bajo indicación expresa. Para realizar el pedido de peldaños se debe referenciar de la siguiente manera:*nombre del modelo + color + acabado + formato + tipo de peldaño + sin o con ranuras*
Ejemplo: Novocemento Grey Natural 45x90 Gradone 45 con ranuras.

Este es un producto fabricado artesanalmente, por lo que posibles variaciones de tono, textura o dimension deben considerarse propias del material y no será objeto de reclamación.

Technical Solutions / Soluciones Técnicas

Digital Printing / Impresión Digital

The digital printing system is a process of decorating ceramic pieces using an ink-jet application to enable the development of high quality photo reproductions (including images, drawings, text, logos, etc...), maintaining the high technical characteristics of our ceramic products.

With our special decoration system, as a result, we can offer pieces of a greater realism due to the fact that it can achieve higher printing resolutions.

Another advantage of this system is the ecological aspect, since by using only four colors (CMYK), the number of materials used in the production are substantially reduced, thereby reducing the extraction of these materials and its environmental impact.

El sistema de impresión digital es un proceso de decoración de piezas cerámicas, mediante una aplicación de inyección (CMYK) que posibilita el desarrollo de piezas con reproducciones fotograficas en alta calidad (ya sean imágenes, dibujos, textos, logotipos,..etc), manteniendo las elevadas prestaciones de nuestro producto cerámico.

Con este proceso digital de decoración se consigue un mayor realismo en la fotografia o dibujo impresa en la pieza, ya que se pueden obtener unas resoluciones más altas de impresión que las conseguidas hasta ahora.

Otra de las ventajas de este sistema es el aspecto ecológico, ya que al utilizar 4 colores (CMYK) se reducen sustancialmente el número de materiales utilizados en producción, reduciendo así la extracción de los mismos y su impacto medioambiental.

Train Station. Munich. GERMANY
Custom 1000sqm Project with Digital Printing

Water Jet / Corte de Agua

In order to create custom floor designs, usually including borders and center pieces, combining different collections we use the Water Jet system.
The Water Jet system is based on a tool that is capable of slicing into porcelain tiles using a water jet at a high speed and pressure, or a mixture of water and an abrasive substances. The process is essentially the same as water erosion found in nature but accelerated and concentrated by orders of magnitude. Water Jet cutters are capable of producing rather intricate cuts in porcelain tiles, in other way impossible to obtain.

The advantages of this system go beyond the final visual results.

- More precise cuts, avoiding torns or unstructured shapes when handling the product.
- Allows precise cuts on thicker pieces with lower net weight.
- Enables any desired design to be manufactured according to what the client wants.

El sistema de Corte de Agua lo utilizamos para poder crear diseños de pavimentos personalizados, normalmente incluyendo cenefas y centros customizados, que combinen diferentes colecciones en los mismos.
Este sistema se basa en una cortadora por chorro de agua capaz de cortar el porcelánico con una alta velocidad y presión, o una mezcla de agua y una sustancia abrasiva. El proceso es esencialmente el mismo que la erosión del agua produce en la naturaleza pero acelerado y concentrado en órdenes de magnitud. Las cortadoras por chorro de agua son capaces de producir intrincados cortes en el porcelánico, de otra forma imposibles de conseguir.

Las ventajas de este proceso van más allá de las meramente estéticas:

- El corte es de mejor calidad, ya que no produce desgarros ni deformaciones por esfuerzos de corte o aportación de calor.
- Permite cortes de mayor espesor y menor ancho de malla.
- Permite la realización de cualquier diseño que desee el cliente.

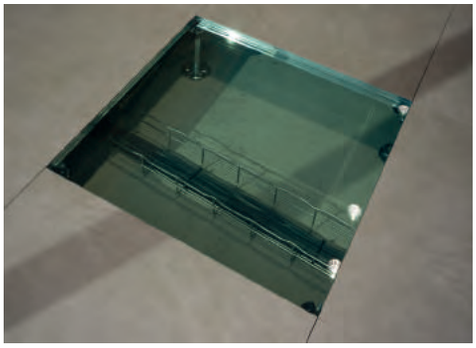
Technical Solutions / Soluciones Técnicas

Interior Raised Floors / Pavimento Sobreelevado Interior



Available for size 59,55x59,55 cm - 23,44''x23,44''
Disponible para formato 59,55x59,55 cm

The Raised Floor system for interior spaces is a technical solution for new buildings and refurbishments that will raise the functional floor surface from the floor substrate in order to offer the following advantages:

Flexibility in the distribution of the spaces, as the panels can be easily removed and re-positioned.
Practicality in maintenance operations as the panels can be lifted to reach all techical elements beneath.
Versatility as the raised floor can also be positioned over a pre-existing floor and can be used to level surfaces with different heights.
Aesthetic qualities as this surface guarantees excellent maintainance and durability over time.

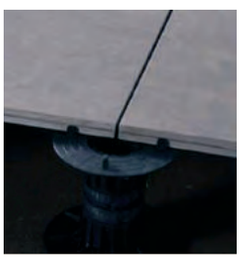
This system is composed of two main elements: the panel and its support structure. The panel, is made by gluing a finishing slab of porcelain onto a 3-4 cm support. It is supported by a metalic frame consisting of crossbeams and adjustable pedestal for height adjustement giving a void space between floor substrate and the functional floor surface. In the technical space concealed between the substrate and the floor, any type of technical plant or equipment can be housed. The minimum height of the floor with respect to the support surface varies from 7 to 8 cm, so the solution of the raised floor can also be adapted to pre-existing floors.

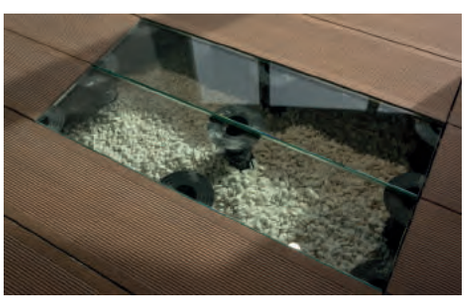
El sistema de Suelo Sobreelevado para interiores es una solución técnica para obra nueva y reforma que permite elevar la superficie transitable para separarla del substrato y así obtener las siguientes ventajas:

Flexibilidad en la distribución de los espacios por la facilidad de sacar las piezas y moverlas a otra posición.
Accesibilidad. Facilidad en el mantenimiento debido al fácil acceso al espacio entre suelo y pavimento.
Versatilidad. El suelo sobreelevado puede ser colocado sobre un piso ya existente y se puede utilizar para unir superficies de diferentes alturas.
Calidad estética debido a la facilidad de limpieza, inalterabilidad y durabilidad en el tiempo.

Este sistema está compuesto por dos elementos principales: el panel y su estructura de apoyo. El panel, se realiza pegando la pieza de porcelánico sobre un soporte de 3-4 cm. La pieza va montada sobre un marco metálico con unos travesaños y unos pedestales de altura ajustable para dejar un espacio vacío entre el suelo y la superficie de tránsito. El porcelánico constituye una superfície transitable, para garantizar la calidad estética, mientras que cualquier tipo de conexiones o equipos pueden ser alojados en el espacio oculto entre el substrato y la superfície. La altura mínima del suelo con respecto a la superficie de soporte varía de 7 a 8 cm, por lo que la solución de suelo elevado también puede adaptarse a pavimentos ya existentes.

Exterior Raised Floors / Pavimento Sobreelevado Exterior





The Exterior Raised Flooring system offers the possibility of having flat paved surfaces suitable for traffic in outdoor areas that may or may not have slopes (up to a 3% inclination). At the same time, it offers a ventilated cover with perfect drainage of the paved surface performing the filtration of water through the joints between tiles as well as better maintenance and greater insulation.

This system of an easy installation is formed by 20mm tiles (either one individual piece of 20mm or two pieces of 10mm glued together), placed on a support base that are the **PLOTS**, made of polypropylene. With these, it is possible to create a space between the tiles and the surface, which can on a rooftop or a terrace, and that will be used for passage of pipes. The tiles can be easily moved around without losing any stability.

There are two types of plots: fixed (15 mm height) for flat areas or adjustable (from 65 mm to 310 mm height) to solve any levelling issues in outdoor areas.

El sistema de Pavimento Sobreelevado Exterior sirve para conseguir superficies pavimentadas planas y aptas para el tránsito sobre suelos con o sin pendientes (siempre inferiores al 3%). Se consigue una cubierta ventilada, con un perfecto drenaje de la superficie pavimentada, realizándose la filtración del agua por las juntas entre baldosas con la ventaja de un mejor mantenimiento y un mayor aislamiento térmico.

Este sistema de fácil instalación, está formado por baldosas de 20mm (una pieza individual de 20mm o dos piezas de 10mm pegadas), instaladas sobre unas bases, denominadas **PLOTS** de polipropileno, para crear un espacio entre éste y la superficie, que puede ser una azotea o terraza exterior, y que puede ser utilizado para el paso de canalizaciones. Además, las piezas se pueden sustituir e intercambiar por otras del sistema sin pérdida de estabilidad.

Existen dos tipos de plots o soportes: fijos (15 mm altura) paras zonas planas o regulables (desde 65 mm a 310 mm altura) para resolver todas las soluciones de sobreelevaciones para exteriores.

Technical Solutions / Soluciones Técnicas

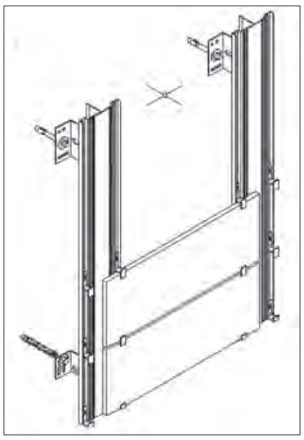
Ventilated Façades / Fachadas Ventiladas

The Ventilated Façade system is an exterior cladding system for buildings offering a combination between the maximum level of aesthetic appeal and technical advantages for any new building or renovation.

From the structural point of view, this is a system composed of an external facade made of porcelain stoneware slabs that are mechanically anchored to the perimeter framework of the building by means of a structure in aluminium alloy. Due to the particular characteristics of this construction technique, the surface of the cladding remains separate from the masonry. The resulting cavity is partially occupied by a layer of thermal insulating material, leaving the rest of the space empty to allow ventilation. Therefore a continuous flow of aeration is created providing significant benefits such as:

- Energy saving, thermal insulation and sound proofing. Protection against water.
- Healthier environment - in terms of breathability and a decrease of heat loads.
- No deterioration of the appearance or technical structure over time.
- Exceptional results in renovation works.
- Security when fixing coatings due to the mechanical and chemical anchorage.
- Easy to clean, maintain and manipulate.

TYPES OF SYSTEMS
Visible system: The anchorage of the material by mounting clips, causes it to be visible from the outside. This system does not require any manipulation of the pieces.
Hidden system: The anchorage takes place by using the side grooves that have to be made on the profiles of every piece of porcelain in order for the clips not to be seen from the outside.



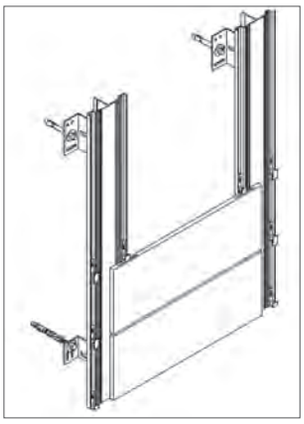
Visible System. Anclaje Visto

El sistema de Fachada Ventilada es un sistema de revestimiento exterior de edificios, la combinación ideal entre el máximo nivel estético y las mejores características térmicas para edificio de obra nueva o renovación.

Desde el punto de vista estructural, es un sistema voladizo, compuesto de una cara externa de piezas de gres porcelánico fijadas mecánicamente al perímetro del edificio por medio de una estructura de perfiles de aluminio. Gracias a esta técnica la superficie del revestimiento se mantiene separada de la mampostería. La cavidad resultante está parcialmente ocupada por una capa de material aislante térmico, dejando el resto del espacio vacío para permitir la ventilación. De esta manera se crea un flujo continuo de aireación, que proporciona beneficios significativos como:

- Ahorro de energía y aislamiento térmico y acústico. Protección contra el agua.
- Medio ambiente más saludable - transpirabilidad y una disminución de las cargas térmicas.
- Sin deterioro del aspecto de la fachada exterior ni de las características técnicas por el paso del tiempo.
- Resultados excepcionales en obras de renovación.
- Seguridad en la fijación de los revestimientos al usar anclajes mecánicos y químicos.
- Facilidad en limpieza, mantenimiento y manipulación.

TIPOS DE SISTEMA
Sistema visto: El anclaje del material mediante grapas de fijación, provoca que éste sea visible desde el exterior. Este sistema, a diferencia del sistema oculto, no precisa mecanización adicional de las piezas de porcelánico.
Sistema oculto: Mediante la mecanización de las piezas en el lateral (ranurado), el anclaje del material porcelánico no es visible desde el exterior.



Hidden System. Anclaje Oculto

Bonded Façades With Mechanical Anchorage / Fachadas Pegadas con Anclaje Mecánico

The Bonded Façade system upgrades the appearance of façades as they provide a modern and innovative appearance that will be durable in time due to the use of our high-end technical porcelain. Currently, there are adhesives that enable an optimum bonding on the façade, however, in order to ensure maximum security, it is important to use a safety mechanical anchorage system that may be visible or hidden. This system offers the following benefits:

- Greater impermeability and resistance against humidity and atmospheric agents.
- Lighter weight in comparison to façades made up of other materials.
- Minimum maintenance required.
- Energy efficiency gain.

El sistema de Fachada Pegada incrementa el valor estético de la fachada al aportar un acabado moderno e innovativo de alta calidad que será perdurable en el tiempo debido al uso de nuestro porcelánico técnico. En la actualidad, existen adhesivos que nos permiten mejorar el aplacado en fachada pero, para garantizar la seguridad de la misma ante posibles desprendimientos de las baldosas, se han diseñado sistemas de fijación con anclaje mecánico oculto y visto para su colocación con estas ventajas:

- Mayor impermeabilidad y resistencia contra la humedad y los agentes atmosféricos.
- Menor peso respecto a otras fachadas con otros materiales.
- Mínimo mantenimiento requerido.
- Mejora de la eficiencia energética.

*Please note that due to the flexibility of the 0,75 cm thickness wall tiles, these could present a slight curvature (within EU tolerance). This effect is then ammended by the application of the tile adhesive - due to the uniform tension exerted. It is highly recommended to use leveling systems to ensure flatness of the pieces after installation.

Muy importante tener en cuenta que las piezas de espesor 0,75 cm, debido a su flexibilidad, pueden presentar en algún caso una ligera curvatura (siempre dentro de la normativa vigente) que tras su colocación se corrige por la tensión uniforme del material de agarre. Se recomienda el uso de sistemas de nivelación en la colocación del material para garantizar la planeidad de las piezas.

Except Skin and Rich mosaics.

Tests performed in internal laboratory _ Ensayo realizado en laboratorio interno.
For projects check technical information with our commercial network _ Para proyectos obtenga información técnica a través de nuestra red comercial.

WOOD, STONE, GLASS and METAL mosaics are naturals products made through a handmade process, therefore, its possible shade or size variations must be considered as typical features of the material and they will not be admitted in a claim.
WOOD, STONE, GLASS y METAL mosaicos son productos naturales fabricados artesanalmente, por lo que posibles variaciones de tono, textura o dimensión deben considerarse propias del material y no será objeto de reclamación.

PVD. PVD

Physical Vapor Deposition (PVD)
Pvd is a field in the application of nanotechnology. The process consists of depositing layers of atoms, inside a vacuum chamber, to a solid surface. The layering is produced by the condensation of a vaporized metal (such as gold, titanium, platinum etc.) over the selected surface.
Advantages: High resistance to abrasion and scratches; much higher than metals applied by firing.
As a general rule, any non-agressive, pH neutral product have to be used. Do not mix pieces from different lots.
Due to the special characteristics involved in the PVD production process of the Copper finished pieces, these may present tonality variations that will have to be considered part of the product.

El PVD es uno de los campos de aplicación de la nanotecnología. El proceso consiste en depositar capas de átomos, en una cámara de alto vacío, sobre una superficie sólida. El recubrimiento se produce por la condensación de un metal vaporizado, oro, titanio, platino, ect. sobre el material a recubrir.
Ventajas: Mayor resistencia al rayado y a la abrasión que los metales aplicados por cocción.
Para la limpieza de estos materiales deben utilizarse productos no agresivos con pH neutro. No mezclar piezas de diferentes lotes.
Dadas las características del proceso de recubrimiento en bronce de las piezas mediante el sistema de PVD, éstas pueden presentar variaciones de tono.

Advice for Installation / Consejos de colocación

CARE TO BE TAKEN DURING THE CONSTRUCTION

Our ceramic products are a finishing product within the construction process, so we advise to install them once other building works have been completed i.e. structures, masonry, flooring, ceilings... This will minimize the collateral damage that may occur when the product is installed too soon. Should the product be placed before the end of the construction, one will have to take special care to protect the pieces until the works are finalized. Especially in the case of our crystal polished finish products, these collections will be have to be covered and protected from potential scratches.

PRE-INSTALLATION

• Upon receiving the tiles it is essential to check if the tone, size and quality meet the required standards in advance, as well as assuring the lack of any visible surface defects. In case of facing any problems, our technical team will be able to study these when informed before having installed the product.
• One must choose the proper tools for the installation of ceramic products (serrated edged comb, rubber mallet, suction cups, spreaders and clamps for laying, jointing rubber float ...)
• Mix pieces from different boxes.

SUPPORT BASE PREPARATION

The support base for wall or floor for the tiles must be stable, dry, flat and it must have the adequate consistency. This base must never be too hot or too cold and should be clean. One must not forget to clean any dust, grease or oil leftovers to facilitate an optimal adhesion.
It is convenient to use slightly rough support bases, altering any excessively smooth leveling layer, in order to ensure greater adherence.

ADHESIVE CHOICE

The type of adhesive will be determined by the water absorption of each type of tile. In this case, it is advisable to employ the technique of placing a thin layer of cement adhesive of type C2.
Please pay special attention to the recommendations for maintenance and use which are included in the inside of the boxes of each decorative and/or special piece.
For formats larger than 30x30cm, we recommend the double-layer-adhesive. This technique involves the appliance of adhesive on the support base as well as on the tile; this technique is strongly recommended for outdoors.
The bonding material must be applied with serrated edged comb to achieve a homogeneous adhesive distribution throughout the laying surface, even in the corners of the tile. A non-uniform adhesive layer will cause tensions on the tile, which will create an “eyebrow” effect. It is advisable to follow the instructions of the adhesives manufacturer, particularly for different cement-based bonding materials.

TILE INSTALLATION

The handling of the tiles, especially the rectified, must be done with utmost care to avoid scratches or chipping of the tiles.
During the installation process, the surface should not be marked by graphite materials (pencils) or permanent markers, especially in the case of polished products to avoid potential cleaning problems.
In order to properly install our rectified white body wall tiles, check the back side of the tiles to find an arrow that will serve as the guide to installation of all pieces in the same direction.
In large format porcelain pieces (over 60cm of any of its sides) it is convenient to use leveling clips to ensure the flatness of the pieces (such as the Raimondi leveling system, although there may be other manufacturers recommended in the market).
During installation of tiles, the use of at least 2mm spreaders is advisable. For locked placement, it is advisable to install at a distance from 1/3 of the piece, never at half of the piece.

JOINTS AND GROUTS

The main functions of installation joints are to absorb deformations of the support, to increase surface adhesion between the parts and the bonding material, and to improve the impermeability of the surface.
It is necessary to respect the indications given below:
• Structural joints: the construction project already takes into account the existence of these joints in the floor coverings. These must also abide when covering the joint with plastic trims.
• Perimeter joints: it is always appropriate to provide these joints that isolate the tile and bonding material from any structural movements, avoiding tensions with them. Perimeter joints are normally hidden by the skirting board or the tile itself; they must have a width of 5 to 10 mm, and may be empty or filled with deformable material.
• Expansion joints: allow deformations due to thermal and hygroscopic variations between tiles between the bonding material and the support base. Usually designed with a width of 5-8 mm and surfaces from 25 m2 (in sections of 5x5 m2) indoor and surfaces from 9 m2 (in sections of 3x3 m2) outdoors. These joints must be well executed; this means that they must be flexible, waterproof, well bonded and must reach the base support.
• Installation joints: those between tiles. Before grouting these spaces must be empty; without any bonding materials. It is not recommended to fix any floor without joints, advising a minimum joint of 2-3 mm. The grout used in installation joints must be applied with a rubber float. The market offers a wide range of grouts, which are suitable for each type of tile and temperature as specified by the manufacturer of the grout, in which the type of product to be used, colors and waiting time before grouting should be recommended.
Before grouting, it is advisable to test a small area of the part to determine whether the chosen grout affects or stains the surface of the piece. In this case, one should contact the grout manufacturer. Ask the manufacturer for a suitable cleaner for this type of grip material. A bonding material with a thin granulometry is desirable in order to avoid scratches on the tile during its placement.

CUIDADOS A SEGUIR DURANTE LA CONSTRUCCIÓN

Nuestros productos cerámicos se pueden considerar acabados finales en la construcción, por ello es recomendable ser colocados sólo cuando el resto de los trabajos constructivos hayan finalizado (estructuras, mampostería, solados, techos, instalaciones,…) y en especial los productos porcelánicos para suelos. De este modo se minimizarán los daños que pueden experimentar el producto cerámico por haber sido colocados demasiado pronto.
Cuando los productos porcelánicos son colocados antes de finalizar la construcción hay que tener especial cuidado para proteger la pieza hasta que se ponga en servicio normal de utilización.

CUESTIONES PREVIAS A LA COLOCACIÓN

•Al recibir los productos cerámicos es importante previamente comprobar si el tono, calibre y calidad son los requeridos, así como la existencia de defectos superficiales visibles.
•Hay que elegir las herramientas y útiles adecuados para la colocación de los productos cerámicos (llana metálica dentada, maza de goma, ventosas, crucetas y grapas para la colocación, llana de goma para rejuntar, …)
•Hay que mezclar piezas de varias cajas.

PREPARACIÓN DEL SOPORTE

El fondo o soporte para pared o suelo sobre el que se colocarán las baldosas debe estar estable, seco, nivelado o aplomado con la consistencia adecuada, no debiendo estar ni helado ni excesivamente caliente y limpio sin restos de polvo, grasa o aceite. Es conveniente disponer de soportes rugosos alterando los soportes excesivamente lisos o la propia capa de nivelación ligeramente para garantizar mayor adhesión.

ELECCIÓN DEL ADHESIVO

La elección del tipo de adhesivo vendrá determinada por la absorción del agua de cada tipo de baldosa. En nuestro caso, se aconseja emplear la técnica de colocación en capa fina con el uso de Adhesivos Cementosos tipo C2.
Para formatos superiores a 30x30cm, se recomienda la técnica de colocación de doble encolado, esto es, aplicar adhesivo sobre el soporte y en la baldosa, en especial en exteriores.
El material de agarre debe aplicarse con una llana dentada para conseguir una distribución del adhesivo homogénea por toda la superficie de colocación incluso en las esquinas de la baldosa, presionando la baldosa sobre el adhesivo todavía fresco. De no ser uniforme la capa de adhesivo provocará tensiones en la baldosa que generan a la larga el efecto “ceja”.
Es conveniente seguir las instrucciones del fabricante de adhesivos, en especial para los soportes diferentes de base cementosa.
En el caso de piezas complementarias/decorativas, prestar especial atención a las recomendaciones de uso y limpieza indicadas en el interior de las cajas según modelos.

COLOCACIÓN DE LAS BALDOSAS

La manipulación previa de las baldosas, en especial las rectificadas, ha de realizarse con el máximo cuidado, para evitar despuntados, rayas o desconchados en su superficie.
Durante la colocación, no deberá marcarse la superficie de utilización del material con lápices (grafito) o rotuladores indelebles, especialmente en el caso de los productos pulidos para evitar posibles problemas de limpieza de los mismos.
Para la correcta colocación del revestimiento de pasta blanca rectificada, ver el anverso de la pieza, existe una Flecha que nos indica el sentido de colocación, colocar todas las piezas en el mismo sentido de colocación.
En la colocación de las baldosas se recomiendo el uso de crucetas de al menos 2 mm. En colocación trabada es aconsejable la colocación a una distancia de 1/3 de la pieza, nunca a la mitad de la pieza.
En pavimentos y revestimientos de formatos mayores de 60 cm en alguno de sus lados, es conveniente el uso de sistemas de nivelación de colocación para garantizar la planitud de las piezas.

LAS JUNTAS Y REJUNTADOS

Las principales funciones de las juntas de colocación son: absorber deformaciones del soporte, aumentar la superficie de adherencia entre las piezas y el material de agarre, y mejorar la impermeabilidad de la superficie.
Es conveniente respetar las juntas que se indican a continuación:
•Juntas estructurales: el proyecto constructivo ya tiene prevista la existencia de estas juntas en el solado que se deben respetar también al colocar las baldosas y éstas se deben recubrir con materiales deformables.
•Juntas perimetrales: siempre es conveniente prever estas juntas que aíslan la baldosa y al adhesivo de los movimientos de otros elementos estructurales constructivos como paredes-suelos, pilares o puertas-ventanas, evitando tensiones con ello. Normalmente quedan ocultas por el rodapié o la propia baldosa, deben tener una anchura de 5 a 10 mm, y pueden quedar vacías o rellenas de material deformable.
•Juntas de dilatación: permiten las deformaciones por variaciones térmicas e higroscópicas entre baldosas, adhesivo y soporte. Normalmente se diseñan con una anchura mínima de 5 a 8 mm y en superficies a partir de 25 m2 (en paños de 5x5 m2) en interiores y en superficies a partir de 9 m2 (en paños de 3x3 m2) en exteriores. Estas juntas deben estar bien ejecutadas, esto es, ser flexibles, impermeables, bien adheridas y llegar hasta el soporte base.
•Juntas de colocación: son las existentes entre baldosa y baldosa. Antes del rejuntado estas juntas deben estar vacías, por tanto sin materiales de agarre de la construcción. Se desaconseja una colocación a junta unida o a “testa” aconsejándose una junta mínima de 2-3 mm.
El material de rejuntado que se utiliza en las juntas de colocación se debe aplicar con una llana de goma. En el mercado existe una amplia gama de materiales de rejuntado, que se adecua a cada tipo de baldosas y ambiente según especificaciones del fabricante del material de rejuntado en las que se debe recomendar el tipo de producto a emplear, colores y tiempo de espera hasta el comienzo del rejuntado.
Antes del rejuntado, es conveniente probar en un área pequeña de la pieza para determinar si la lechada elegida decolora o mancha la superficie de la pieza, en cuyo caso hay que contactar con el fabricante del material de rejuntado. Pedirle al fabricante del rejunte un limpiador adecuado para este tipo de material de agarre. Es conveniente que la granulometría del material de rejuntado sea fina, para evitar posibles rayas en la baldosa en su colocación.

Advice for Cleaning / Consejos de Limpieza

THE FIRST CLEANING "AFTER INSTALLATION"

The most important cleaning operation is performed immediately after laying the tiles. This involves the complete removal of residues and dirt from the tile placement. An inadequate or late removal of this waste can create a cementitious layer on the tile capable of absorbing all forms of dirt. This may give the impression that the tile gets dirty when the actual problem resides in the surface film of dirt which was not removed immediately after laying.
Once the grouting of the tiles is finished, it is important, while the grout is still wet, to carefully remove any excess material immediately. This can be done using a sponge and plenty of clean water, repeating this as many times as necessary.
Do not perform the cleaning with metal tools, scrapers or abrasive pads. For stubborn stains, clean with alcohol and lukewarm water and rub with a clean cloth. If they do not disappear, check with the relevant technical department.
Once the above mentioned washing is done, another washing should be carried out using basic or alkaline degreasing agents, as acid washing can leave stickiness on the pavement which could help retain dirt. In areas where water is calcareous, it is convenient to dry the surface, in order to prevent the deposition of carbonates which will reduce the surfaces' gleam.

REGULAR MAINTENANCE

Many available cleaning products for general use can be used with our products. For daily cleaning, one can use detergents or degreasing products diluted in warm water, following each product's instructions.
It is important that the cleaner does not have oil, animal fat, or soap base. These components may leave an invisible residue whilst absorbing dirt (lime stratifications detergent or residues). It is also important that the tile receives a thorough rinsing with clean water after the cleaning process is complete.

The low water absorption and high standards met by all porcelain tiles ensure a product which is easy to maintain. Our products do not require the use of sealants or waxes. These superficial coatings can really affect the performance of the tile in a negative manner.

It is important to note that hydrofluoric acid (HF) and derivatives can irreparably damage the tile.

The general steps for regular cleaning of our ceramic products can be summarized as follows:
• Remove any solid or liquid waste from the tile, sweeping with a soft bristle broom or vacuuming.
• Clean up liquid spills as soon as possible with lukewarm water.
• Apply the recommended amount and dilution of the cleaner for the tile (follow the cleaner manufacturer's instructions). The wiper must remain in the tile a minimum period of 5 minutes.
• For unpolished tiles, scrub with a nylon sponge or soft bristle brush. A floor machine equipped with a nylon pad or bristle brush can be used for heavily soiled surfaces. For polished tiles, clean with a nonabrasive cloth.
• Remove the dirty cleaning solution and water with a vacuum cleaner or cloth. Rinse the porcelain tile with clean water and remove again with a vacuum cleaner, mop or towel. It is absolutely essential that all detergent residues are removed completely from the tile. Any remaining detergent that dries on the tiles surface can form a coating that can trap dirt and be very difficult to remove. The tile should be rinsed several times to remove all detergent residues.

During use, the cleaning of the tiles should be similar to window cleaning. Ammonia and even bleach type products can be employed, but both must be diluted in water.
In case of special stains and/or particularly resistant, it is advisable to use specific detergents according to the cleaners' manufacturer. Do not forget that removing any type of stain is easier when it is still fresh.
It is important to always do a pre-test the detergent products result on a small sample of the porcelain.

Please pay special attention to the recommendations for maintenance and use, which are included in the inside of the boxes of each decorative and/or special piece.

TILES WITH METALLIC EFFECTS - PVD

This type of tiles require following these recommended guidelines, shown below, for cleaning:
• In general, you can use any non-aggressive and neutral pH product.
• In general, we recommend the use of ammonia-based products (NH3) diluted in water, never directly on the piece.
• You cannot use chemically aggressive products.
• You cannot use products with hydrochloric acid (HCl). The remaining acid products should be used with caution in very diluted concentrations.
• Citric acid and other acidic food products leave stains if left too long to act on the tile. They must be removed as soon as possible.
• The use of powder products of abrasive action is not recommended.

LA PRIMERA LIMPIEZA DESPUÉS DE LA COLOCACIÓN

La operación de limpieza más importante se lleva a cabo inmediatamente "después de la colocación de la baldosa". Esto implica la eliminación completa de los residuos de lechada y de la suciedad de la colocación de las propias baldosas. Una eliminación inadecuada o tardía de estos residuos puede crear sobre la baldosa una película cementosa capaz de absorber toda forma de suciedad, dando la impresión que se ensucia la baldosa, cuando el problema está en la película superficial de suciedad.
Una vez efectuado el rejuntado de las baldosas, es importante cuando el material de rejuntado todavía está fresco, eliminar el material sobrante cuidadosa e inmediatamente, utilizando para ello una esponja y agua limpia abundante, repitiendo esta operación tantas veces como sea necesario.
No debe realizarse la limpieza del material con espátulas metálicas ni estropajos abrasivos. En el caso de manchas resistentes, limpiar con alcohol y agua caliente y frotar con un paño limpio. Si no desaparecen, consultar con el departamento técnico correspondiente.
Una vez efectuado el lavado mencionado arriba, deberá efectuarse un lavado básico o alcalino utilizando detergentes desengrasantes, ya que el lavado ácido puede dejar una untuosidad sobre el pavimento que podría contribuir a retener la suciedad. En aquellas zonas donde el agua sea calcárea conviene secar la superficie para evitar la deposición de carbonatos que disminuyen el brillo superficial.

EL MANTENIMIENTO REGULAR

Muchos productos de limpieza de uso general que están disponibles son aceptables para el uso en nuestros productos. Se puede emplear para la limpieza diaria detergentes o desengrasantes diluidos en agua caliente, según indicaciones del envase del limpiador.
Es importante que el limpiador no tenga base de aceite, grasa animal, o jabón. Estos componentes pueden dejar un residuo invisible al atrapar la suciedad (estratificaciones de cal de detergente o residuos de suciedad). También es importante que la baldosa reciba un enjuague a fondo con agua limpia después que el proceso de limpieza se haya completado.

La densidad inherente y baja absorción de agua de todos los productos aseguran un producto que es fácil de mantener.
No requieren el uso de selladores o ceras. Estos recubrimientos superficiales pueden realmente afectar negativamente el rendimiento de la baldosa.

Es muy importante tener en cuenta que el ácido Fluorhídrico (HF) y derivados pueden dañar irremediablemente la baldosa.

Los pasos generales de limpieza regular para nuestros productos cerámicos se pueden resumir del siguiente modo:

• Retirar cualquier residuo sólido o líquido de la baldosa, barriendo con una escoba de cerdas suaves o pasar la aspiradora.
• Limpiar los derrames líquidos tan pronto como sea posible.
• Aplicar la cantidad y dilución del limpiador recomendadas para la baldosa (ver indicaciones del fabricante del limpiador). El limpiador deberá permanecer en la baldosa un periodo mínimo de tiempo de 5 minutos.
• Para baldosas sin pulir, frotar con una esponja de nylon o un cepillo de cerdas suaves. Para superficies muy sucias puede usarse una máquina de piso equipado con una almohadilla de nylon o con un cepillo de cerdas. Para baldosas pulidas , limpie con un trapo no abrasivo o un paño.
• Retirar la solución de limpieza sucia y el agua con una aspiradora o un trapo. Enjuague la pieza con agua limpia y retire de nuevo con una aspiradora, fregona, o una toalla. Es absolutamente esencial para todos los residuos de detergente que se eliminen por completo de la baldosa. Cualquier resto de detergente que se seque sobre la baldosa puede formar un recubrimiento que puede atrapar la suciedad y será muy difícil de eliminar. La baldosa debe enjuagarse varias veces para eliminar todos los residuos de detergente.

Durante su uso, la limpieza de la baldosa debe hacerse de forma similar a la limpieza de cristales. Se puede emplear productos de tipo amoniacal e incluso lejía, ambos diluidos en agua.
En caso de manchas particulares y/o especialmente resistentes, es aconsejable usar detergentes específicos según especificaciones del fabricante del limpiador. No hay que olvidar que la eliminación de cualquier tipo de mancha resulta más fácil cuando ésta todavía está fresca.
Es importante hacer siempre una prueba previa antes de usar los productos detergentes.

En el caso de piezas complementarias/decorativas, prestar especial atención a las recomendaciones de uso y limpieza indicadas en el interior de las cajas según modelos.

BALDOSAS CON EFECTOS METÁLICOS / PVD

En este tipo de baldosas por su especificidad se recomienda seguir las siguientes pautas de limpieza:
• En general, se puede usar cualquier producto no agresivo y con PH neutro.
• En general, se recomienda el uso de productos con base amoniacal (NH3) en concentración rebajada, nunca directamente sobre la pieza.
• No se pueden usar productos agresivos químicamente.
• No se puede usar productos con ácido clorhídrico (HCl). El resto de productos ácidos deben usarse con precaución en concentraciones muy rebajadas.
• El ácido cítrico y otros productos alimentarios ácidos dejarán mancha si se les deja actuar mucho tiempo sobre la baldosa.
• No está recomendado el uso de productos en polvo de acción abrasiva.

Guidelines for Installation and Cleaning Mosaics
Consejos de colocación y limpieza de Mosaicos

Metal

PREPARING FOR TILING: For good adherence to the substrate, this should be completely clean of dust, grease, paint, bits of plaster, or any other substance which may affect the adherence of the mosaic. The substrate to be tiled should be perfectly smooth and leveled.
INSTALLATION: Installation is performed with flexible adhesives containing synthetic additives, for non-absorbent materials. Apply the adhesive with a notched trowel of 3-4 mm and then immediately proceed to the smoothing of the same. Then lay the piece of mosaic onto the bed of adhesive and place it by pressing with a flat look of hard rubber. When laying the next sheet of mosaic, make sure that the distance between the sheets is equal to the width of inner joints that make up the mosaic so to obtain a regular appearance.
GROUTING: Once the adhesive is dry and having removed any remaining, proceed to grout the mosaic with a rubber spatula applying a grout not containing quartz, which can cause scratches on the surface of the mosaic. Any excess of material should be removed from the surface using a sponge before it hardens on the surface, paying special attention that all joints are completely filled. Finally clean the surface of the mosaic by only wetting it and rubbing gently. Pay special care drying the pieces so to avoid possible oxidation.
CLEANING:Use a clean and soft sponge and soapy warm water or alcohol. Important: Do not use acid or alkaline cleaning products, nor ones containing abrasives or cleaning equipment at high pressure.

Glass

PREPARING FOR TILING: For good adherence to the substrate, this should be completely clean of dust, grease, paint, bits of plaster, or any other substance which may affect the adherence of the mosaic. The substrate to be tiled should be perfectly smooth and leveled.
INSTALLATION: Installation is performed with flexible adhesives containing synthetic additives, for non-absorbent materials. Apply the adhesive with a notched trowel of 3-4 mm and then immediately proceed to the smoothing of the same. Then lay the piece of mosaic onto the bed of adhesive and place it by pressing with a flat look of hard rubber. When laying the next sheet of mosaic, make sure that the distance between the sheets is equal to the width of inner joints that make up the mosaic so to obtain a regular appearance. In areas exposed to high humidity, we recommend a bonding and sealing with a resin based adhesive strip.
GROUTING: Once the adhesive is dry and having removed any remaining, proceed to grout the mosaic with a rubber spatula. Any excess of material should be removed from the surface using a sponge, paying special attention that all joints are completely filled. Finally clean the surface of the mosaic by only wetting it and rubbing gently.
CLEANING: Use a household glass cleaner and a soft clean cloth. Important: Do not use acid or alkaline cleaning products, nor ones containing abrasives or cleaning equipment at high pressure.

Wood

Recommended only for wall use.
These mosaics are made of reused wood coming from old wood ships, therefore retain their antiseptic qualities, flame retardant, moisture-proof and environmentally friendly.
Recommended only for wall use.
PREPARING FOR TILING: For good adherence to the substrate, this should be completely clean of dust, grease, paint, bits of plaster, or any other substance which may affect the adherence of the mosaic. The substrate to be tiled should be perfectly smooth and leveled.
INSTALLATION: Installation is performed with special adhesives for wood. Apply the adhesive with a notched trowel of 3-4 mm and then immediately proceed to the smoothing of the same. Then lay the piece of mosaic onto the bed of adhesive and place it by pressing with a flat look of hard rubber. For products with a regular pattern, when laying the next sheet of mosaic you must ensure that the distance between the sheets is equal to the width of inner joints that make up the mosaic so to obtain a regular appearance. For other patterns, adjust the width as per your aesthetic criteria.
GROUTING: Once the adhesive is dry and having removed any remaining, proceed to grout the mosaic with a rubber spatula and a non abrasive grout. Any excess of material should be removed from the surface using a sponge before it hardens on the surface, paying special attention that all joints are completely filled. Finally clean the surface of the mosaic by only wetting it and rubbing gently.
CLEANING: Use a soft brush to clean the dust from the mosaic or a semi-dry towel. You may use vegetable oil to give the mosaic its original appearance. Important: Do not use acid or alkaline cleaning products, nor abrasives. Apply normal maintenance for natural woods.

Stone

The mosaics made of river rocks bear humidity.
PREPARING FOR TILING: For good adherence to the substrate, this should be completely clean of dust, grease, paint, bits of plaster, or any other substance which may affect the adherence of the mosaic.
The substrate to be tiled should be perfectly smooth and leveled.
INSTALLATION: Install leaving a recommended space of 2 cm between pieces and wall. Skirting can be placed on the joint but not on the stones due to their irregular face. Apply the standard adhesive with a spatula and then lay the piece of mosaic onto the bed of adhesive and place it by pressing on the stones, while the adhesive seeps between them.
Place the pieces joining them to each other thus achieving an effect of continuity.
GROUTING: Once the adhesive is dry, proceed to grout the mosaic with a liquid seal which will allow us to fill the grout up to the desired level. The level of the grout should remain at a level so to keep showing the texture of the stones as a too high joint is not aesthetic. Any excess of material should be removed from the surface using a sponge before it hardens on the surface, paying special attention that all joints are completely filled. Finally clean the surface of the mosaic by only wetting it and rubbing gently.
CLEANING: Use a brush to clean the surface of the mosaic. Important: Do not use cleaning products which may damage the grout and try to avoid acid, alkaline or abrasive materials.

More information on our web site

Metal

PREPARACIÓN DEL SOPORTE: El soporte debe estar totalmente limpio de polvo, grasas, pinturas, restos de yeso, o cualquier otra sustancia que pueda perjudicar la adhesión del mosaico.
INSTALACIÓN: La colocación se realiza con adhesivos flexibles que contengan aditivos sintéticos, para materiales no absorbentes. Aplicar el adhesivo con una espátula dentada de 3-4 mm e inmediatamente después proceder al alisado del mismo. A continuación colocamos la pieza de mosaico sobre el lecho del adhesivo y lo fijamos presionándola con una llana de caucho endurecido. Al colocar la siguiente pieza de mosaico, debe asegurarse que la distancia entre las piezas sea igual que el ancho de la junta de las teselas que forman la pieza para conseguir un aspecto regular.
REJUNTADO: Tras endurecerse el adhesivo y haber eliminado cualquier resto, procederemos al rejuntado del mosaico con una espátula de goma y con un rejunte que no tenga cuarzo, ya que puede provocar rayaduras en la superficie del mosaico. El material sobrante debe eliminarse de la superficie mediante una esponja antes de que el material endurezca sobre la superficie, prestando especial atención a que todas las juntas estén completamente llenas. Finalmente limpiaremos la superficie del mosaico sólo humedeciéndola y frotando con suavidad.
LIMPIEZA: Utilice una esponja limpia y suave y una solución jabonosa caliente o alcohol.
Importante: No utilizar Productos de limpieza ácidos o alcalinos, ni tampoco con componentes abrasivos o equipos de limpieza de alta presión.

Cristal

PREPARACIÓN DEL SOPORTE: El soporte debe estar nivelado y limpio de polvo, grasas, pinturas, restos de yeso, o cualquier otra sustancia que pueda perjudicar la adhesión del mosaico.
INSTALACIÓN: La colocación se realiza con adhesivos flexibles que contengan aditivos sintéticos, para materiales no absorbentes. Aplicar el adhesivo con una espátula dentada de 3-4 mm e inmediatamente después proceder al alisado del mismo. A continuación colocamos la pieza de mosaico sobre el lecho del adhesivo y lo fijamos presionándola con una llana de caucho endurecido. Al colocar la siguiente pieza de mosaico, debe asegurarse que la distancia entre las piezas sea igual que el ancho de la junta de las teselas que forman la pieza para conseguir un aspecto regular. En superficies expuestas a gran humedad, se recomienda realizar un pegado y sellado con un adhesivo a base de resina reactiva.
REJUNTADO: Tras endurecerse el adhesivo y haber eliminado cualquier resto, procederemos al rejuntado del mosaico con una espátula de goma. El material sobrante debe eliminarse de la superficie mediante una esponja, prestando especial atención a que todas las juntas estén completamente llenas. Finalmente limpiaremos la superficie del mosaico sólo humedeciéndola y frotando con suavidad.
LIMPIEZA: Utilice un limpiador de vidrios doméstico y un paño limpio y suave. Importante: No utilizar Productos de limpieza ácidos o alcalinos, ni tampoco con componentes abrasivos o equipos de limpieza de alta presión.

Madera

Recomendado únicamente para revestimiento.
Los mosaicos de madera se han realizado reutilizando madera de barcos antiguos, conservando sus cualidades antisépticas, ignífugas, a prueba de humedad y respetuoso con el medio ambiente.
PREPARACIÓN DEL SOPORTE: El soporte debe estar nivelado y limpio de polvo, grasas, pinturas, restos de yeso, o cualquier otra sustancia que pueda perjudicar la adhesión del mosaico.
INSTALACIÓN: La colocación se realiza con adhesivos stándard, especiales para madera e incluso si la superficie de adhesión lo permite, se puede utilizar pegamento. Aplicar el adhesivo con una espátula dentada de 3-4 mm e inmediatamente después proceder al alisado del mismo. A continuación colocamos la pieza de mosaico sobre el lecho del adhesivo y lo fijamos presionándola con una llana de caucho endurecido.
Para productos con patrón regular, debe asegurarse que al colocar la siguiente pieza de mosaico, la distancia entre las piezas sea igual que el ancho de la junta de las teselas que forman la pieza para conseguir un aspecto regular. Para productos irregulares ajuste los anchos de la junta según su criterio estético.
REJUNTADO: Tras endurecerse el adhesivo y haber eliminado cualquier resto, procederemos al rejuntado del mosaico con una espátula de goma y con un rejunte no abrasivo. El material sobrante debe eliminarse de la superficie mediante una esponja antes de que el material endurezca sobre la superficie, prestando especial atención a que todas las juntas estén completamente llenas. Finalmente limpiaremos la superficie del mosaico sólo humedeciéndola y frotando con suavidad.
LIMPIEZA: Utilice un cepillo suave para limpiar el polvo del mosaico o una toalla semi-seca. Puede utilizar aceite vegetal para darle de otra vez al mosaico su aspecto original.
Importante: No utilizar Productos de limpieza ácidos o alcalinos, ni tampoco con componentes abrasivos.

Piedra

Los mosaicos de piedras de río soportan perfectamente la humedad.
PREPARACIÓN DEL SOPORTE: El soporte debe estar nivelado y limpio de polvo, grasas, pinturas, restos de yeso, o cualquier otra sustancia que pueda perjudicar la adhesión del mosaico.
INSTALACIÓN: Colocar dejando un espacio aconsejable entre piezas y pared de 2cm. El zócalo se puede colocar sobre la junta pero no sobre las piedras debido a su planimetríaa irregular. Aplicar el adhesivo stándard con la espátula y a continuación colocamos la pieza de mosaico sobre el lecho del adhesivo y lo fijamos presionando sobre las piedras viendo como la cola filtra entre ellas. Colocaremos las piezas ensamblándolas unas con otras consiguiendo así un efecto de continuidad.
REJUNTADO: Tras endurecerse el adhesivo procederemos al rejuntado del mosaico con una junta líquida que nos permitirá determinar el nivel de rejunte deseado. El nivel del rejunte debe estar a una altura tal que guarde un cierto relieve sobre las piedras ya que una junta demasiado alta no es estética. El material sobrante debe eliminarse de la superficie mediante una esponja antes de que el material endurezca sobre la superficie, prestando especial atención a que todas las juntas estén completamente llenas. Finalmente limpiaremos la superficie del mosaico sólo humedeciéndola y frotando con suavidad.
LIMPIEZA: Utilice un cepillo para limpiar la superficie del mosaico. Importante: No utilizar Productos de limpieza que puedan dañar el material de rejunte e intente huir de materiales con componentes ácidos, alcalinos ó abrasivos.

PVD Guidelines / Guia PVD

Gold and Silver Coated Decor Tiles

Physical Vapor Deposition (PVD)

PVD is a field in the application of nanotechnology. The process consists of depositing layers of atoms, inside a vacuum chamber, to a solid surface. The layering is produced by the condensation of a vaporized metal (such as gold, titanium, platinum etc.) over the selected surface.

PRE-INSTALLATION

• Our ceramic products are a finishing product within the construction process, so we advise to install them once other building works have been completed i.e. structures, masonry, flooring, ceilings... This will minimize the collateral damage that may occur when the product is installed too soon.
• Upon receiving the tiles it is essential to check if the tone, size and quality meet the required standards in advance, as well as assuring the lack of any visible surface defects. In case of facing any problems, our technical team will be able to study these when informed before having installed the product.
• These pieces are very delicate and should be treated with care at all times. Inappropriate handling (scratching and rubbing) as well as the use of abrasive products may cause irreparable damage to the pieces.
• There will always be tonality differences between batches, thus it is recommended to order in excess to avoid shortages of material to make sure material from the same batch is supplied.

INSTALLATION

The support base for wall or floor for the tiles must be stable, dry, flat and it must have the adequate consistency. This base must never be too hot or too cold and should be clean. One must not forget to clean any dust, grease or oil leftovers to facilitate an optimal adhesion.

Once the pieces have been properly installed, proceed immediately to remove the remnants of the installation materials with a soft and clean sponge and clean water without rubbing on the pieces.

The recommendation for the grouting of the pieces is to use fine-grained or controlled granulometry (CG.2 according to EN 13888) materials without additives. Clean immediately after grouting with a clean sponge and clean water, while the grout is still humid and is easily removable.

TILE MAINTENANCE AFTER INSTALLATION

This type of tiles require following these recommended guidelines, shown below, for cleaning:

• In general, one must use non-aggressive and neutral pH product.
• In general, the use of ammonia-based products (NH3), always diluted in water, never directly on the piece, is recommended.
• One cannot use chemically aggressive products.
• One cannot use products with hydrochloric acid (HCl). The remaining acid products should be used with caution in very diluted concentrations.
• Citric acid and other acidic food products leave stains if left too long to act on the tile. They must be removed as soon as possible.
• The use of powder products of abrasive action is not recommended.
• A damp cloth and neutral liquid soap will be enough.

Azulejos decorados oro y plata

Physical Vapor Deposition o PVD es un campo en la aplicación de la nanotecnología. El proceso consiste en depositar capas de átomos, dentro de una cámara de vacío, sobre una superficie sólida. La estratificación se produce por la condensación de un metal vaporizado (como oro, titanio, platino, etc.) sobre la superficie seleccionada.

PRE-INSTALACIÓN

• Nuestros productos de cerámica son un producto decorativo dentro del proceso de construcción, por lo que recomendamos instalarlos una vez que se hayan completado otros trabajos de construcción, es decir, estructuras, mampostería, pisos, techos ... Esto minimizará el daño colateral que puede ocurrir cuando el producto es instalado demasiado pronto.
• Al recibir estos azulejos, es esencial verificar si el tono, el tamaño y la calidad cumplen con los estándares requeridos por adelantado, así como también asegurar la ausencia de defectos superficiales visibles. En caso de que surja algún problema, nuestro equipo técnico podrá estudiarlos cuando estén informados antes de haber sido instalado el producto.
• Estas piezas son muy delicadas y deben tratarse con mucho cuidado en todo momento. La manipulación inadecuada (arañazos y roces) y el uso de productos abrasivos pueden causar daños irreparables en las piezas.
• Siempre habrá diferencias de tonalidad entre diferentes lotes, por lo que se recomienda hacer un pedido en exceso para evitar la escasez de material durante la obra y así poder asegurar el suministro de material del mismo lote.

INSTALACIÓN

La base de soporte para la pared o el piso de las baldosas debe ser estable, seca, plana y debe tener la consistencia adecuada. Esta base nunca debe estar demasiado caliente o demasiado fría y debe estar limpia. No debe olvidarse de limpiar el polvo, la grasa o los restos de aceite para facilitar una adhesión óptima.
Una vez que las piezas se hayan instalado correctamente, proceda de inmediato a eliminar los restos de los materiales de instalación con una esponja suave y limpia con agua completamente limpia sin frotar las piezas bruscamente.

La recomendación para el rejuntado de las piezas es utilizar materiales de granulometría de grano fino o controlada (CG.2 según EN 13888) sin aditivos. Limpie inmediatamente después de la lechada con una esponja limpia y agua limpia, mientras que la lechada todavía está húmeda y es fácilmente removible.

MANTENIMIENTO DE AZULEJOS DESPUÉS DE LA INSTALACIÓN

Este tipo de azulejos requieren seguir estas pautas recomendadas, que se muestran a continuación, para la limpieza:

• En general, se debe usar un producto de pH neutral y no agresivo.
• En general, se recomienda el uso de productos a base de amoníaco (NH3), siempre diluidos en agua, nunca directamente en la pieza.
• No se pueden usar productos químicamente agresivos.
• No se pueden usar productos con ácido clorhídrico (HCl). Los productos ácidos restantes deben usarse con precaución en concentraciones muy diluidas.
• El ácido cítrico y otros productos alimenticios ácidos dejan manchas si se dejan demasiado tiempo para actuar sobre las baldosas. Deben eliminarse lo antes posible.
• No es recomendable el uso de productos en polvo de acción abrasiva.
• Un paño húmedo y jabón líquido neutro serán suficientes.

Products commercialized by APARICI PORCELANICO meet all the norms required by Spanish manufactured goods, imposed by the Spanish and the European Law concerning environmental issues. These legal requirements have encouraged us even further when setting our own internal goals; leading to a minimization of any environmental impacts which can derive from our manufacturing process.

Los productos comercializados por APARICI PORCELANICO cumplen en materia medioambiental con la normativa exigible por la legislación Española y Europea aplicable a los productos elaborados en España. Este imperativo legal nos ha motivado más si cabe a marcarnos nuestros objetivos internos para minimizar al máximo los impactos medioambientales derivados de nuestro proceso productivo.

53% Recycled material used in production up to 53%.
Material reciclado usado en producción hasta un 53%.

100% Under the maximum authorized level for pollutant gas emissions.
Nivel de emisiones de contaminantes a la atmósfera inferior al límite autorizado.
