The service-oriented Aparici Contract Division manages the most articulate and complex tile orders, ranging from design to logistics, and from supply to installation. The Aparici Contract Division offers valuable systems engineering and technical drawing support to designers and architects, and all round support to investors with the highest quality standards in residential, hospitality, corporate and retail sectors.

The activities of design, production, project management and logistics are fully integrated to enable the execution of articulated contract projects of any style and dimension, in compliance with the constant pursuit of technical and design excellence. Many projects have made their mark in the history of Aparici among which one can find hotel complexes, shopping centers, airports or residential developments.

Ceramic and porcelain tiles, designed, engineered and manufactured for a specific project.

The Aparici Contract Division interprets and translates every specific aesthetic and functional specification by analysing the design concept and quality standards required by the customer. The Aparici Contract Division provides its customers with tips, solutions and ideas that are functional, cost effective and respond to the customer’s time constraints.

Liaising with the customer and architects, combined with the research, testing, and engineering of each element involved in the project, are key aspects of the approach adopted by the Aparici Contract Division for the execution of “turnkey” projects. This means considering each project as unique, while ensuring the added value of a cutting-edge industrial company, the use of “turnkey” projects. This means considering each project as unique, while ensuring the added value of a cutting-edge industrial company, the use of quality and prestige, a unique Research & Development Centre, three manufacturing facilities, and certified quality systems are the pillars on which the Aparici Contract Division has built its approach and its credibility in the contract sector.

Sales and Marketing

Aparici Contract Division is a qualified solution to the market’s growing demand for a concept that seeks to express uniqueness, distinction and character. It is a world in which the expectations of the designer are always very high: in order to supply suitable solutions, it is necessary to listen to and get a feeling for the client’s needs, identifying languages and procedures that fulfill this important task each and every time. Aparici Contract Division makes the accredited experience of its professionals available in order to achieve this goal.

Operations and Production

Involved and active at all stages of the project, these departments develop the project, devising the products by making detailed construction drawings and building prototypes, often completing mock-ups. All of this allows the design quality to be controlled, to discover any problems in its construction, to add improvements, to discuss with client and designer, even once the works are underway, so as to share decisions and solutions that are “made to measure” in every sense.

Logistics

Logistics according to Aparici’s Contract Division is a package of services that organises, coordinates and supplies products and materials adhering to the terms of the contract. The nerve centre of this activity is the warehouse in which the finished products are managed according to the requirements and phases of each project together with our wide international distribution network.

Quality and Environmental Certification

The Aparici Contract Division complies strictly with the provisions of the UNE-EN ISO 9001:2008 and UNE-EN ISO 14001:2008 regarding quality and environmental management standards. These certifications require the adoption of accurate control systems during every process, from design to production, installation and through to customer service always taking into account and prioritizing our interest and care for our environment.
